Work Experience

Ennovar at Kansas Fiber Network | Software Engineer

- **System Logic Development:** Architected systems for database caching and process scheduling for application in local servers.
- **Automated Processes:** Reduced time for metric compilation by over 90% allowing engineers to focus on network operability
- **Production Environment:** Worked in Agile SLDC environment to rapidly produce iterations of code for stakeholder testing.

Ennovar at Textron Aviation | Technical Operations Team

- **Defense Contracting Security Compliance:** Followed DOD guidelines for working within a strict defense contract environment.
- **Systems Integration & Analytics:** Integrated ServiceNow ticketing data to engineer real-time operational health dashboards.
- **Shop Floor Operations:** Traveled to multiple job sites to run operational checks, ensuring that all assets were working properly.
- **Infrastructure Management:** Ran infrastructure for all-hands livestreams and managed server-based linux remote desktops.

Projects

Network Maintenance Tracker

- **API Integration:** Used internal data to pull live network logs in order to track the uptime of fiber optic cable lines.
- **Database Caching:** Used tools like Redis to improve database speeds by preventing costly queries from slower storage methods.
- **Server Task Brokering:** Implemented logic for task brokerage to prevent inefficient backups in process scheduling.
- **Front-End Development:** Build React front-end with user friendly interface and responsive animations.

Machine Learning Census Data

- **Machine Learning Principles:** Trained unsupervised ML model to search for trends and make predictions based on Census data.
- **Data Cleaning:** Preparing untreated data for use within the ML model's strict parameters for thought processing.
- **Prediction Modeling:** Was able to correctly predict growth trends in the data through the unsupervised data
- **Reporting Key Results:** Translated model findings into usable takeaways that are able to be put into action for stakeholders.
-

Campsite Rating Web App

- **API Integration:** Pulled weather data from OpenMeteo's API as well as interfacing with locational logic to provide accurate data.
- **Algorithmic Rating:** Created a Multi-Criteria Decision Model to rate campsite based off of user preferences and weather API data.
- **Data Collection:** Surveyed online communities for personal campsite rating data. Data was used to help create the rating model.
- **Front-End Development:** Build React front-end with user friendly interface and responsive animations.

Skills

- **Software Engineering & Scripting:** Python (Pandas, NumPy), SQL (PostgreSQL, MySQL, T-SQL), React and CSS, and JavaScript
- **Cloud Infrastructure:** Distributed compute models, automated data pipeline orchestration, and local database caching systems.
- **Development Methodologies & Security:** Agile SDLC practices, and defense contract security compliance standards.
- **Systems Integration & Tooling:** ServiceNow integration, enterprise asset tracking, and custom real-time metric aggregation.
- **Machine Learning and Modeling:** Developed and trained machine learning models to help solve real world problems.

Education

Western Governors University | Bachelors in Data Analytics

- 4.0 GPA
- Data Analytics Major
- Honors Society Member
- Data Club Member

Certifications

AWS Cloud Practitioner | AWS | December, 2025

CompTIA Data+ | CompTIA | January, 2026

CompTIA Project+ | CompTIA | March, 2026
